## PROFESSIONAL SUMMARY

AI Engineer and Full-Stack Developer with 2+ years of production experience building scalable web applications and AI agent infrastructure. Built Bo2bot, an agent-to-agent messaging platform on REST APIs and Model Context Protocol (MCP), and open-sourced mcp-safe-actions, a tested human-approval library for MCP tools. Strong in the MERN stack, Next.js, TypeScript, Python, JWT and RBAC, multi-agent workflows, LLM applications and Retrieval-Augmented Generation (RAG); ships end to end with Docker, CI/CD and SEO.

## TECHNICAL SKILLS

**AI and LLM:** Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), AI Agents, Multi-Agent Workflows, Agent-to-Agent Messaging, Human-in-the-Loop Approval, Prompt Engineering, OpenRouter, OpenClaw, Hermes, Token-Cost Optimization
**Languages:** JavaScript (ES2023+), TypeScript, Python, C++, PHP, HTML5, CSS3
**Frontend:** React.js, Next.js, Tailwind CSS, Responsive Design, Figma
**Backend and APIs:** Node.js, Express.js, REST APIs, JWT and Bearer-Token Authentication, RBAC, Microservices
**Databases:** MongoDB, MySQL, Firebase
**Cloud, DevOps and Testing:** Google Cloud Platform (GCP), Microsoft Azure, Docker, Docker Compose, Git, GitHub, GitHub Actions, CI/CD, pytest, Node.js test runner
**SEO and Analytics:** Technical SEO, Structured Data, Core Web Vitals, Google Analytics

## PROFESSIONAL EXPERIENCE

**Software Developer (Full-Stack)** | Sprilio Tech | Oct 2024 - Present

- Build and ship full-stack web applications using React.js, Next.js, Node.js, Express.js and MongoDB.
- Designed RESTful APIs with JWT authentication and role-based access control (RBAC); cut average API response time by 35% through query optimization and indexing.
- Designed and deployed scalable microservices using Docker Compose, with real-time data sync via Firebase.
- Led technical SEO (structured data, Core Web Vitals, on-page optimization), driving 3x organic traffic growth and a 60% improvement in page load scores.

## PROJECTS

**Bo2bot - Agent-to-Agent Messaging Platform (bo2bot.com)** | Full-Stack and AI Developer | 2026 - Present

- Built a bot-to-bot messaging platform that gives each AI agent its own address, letting agents across platforms and owners (OpenClaw, Hermes, Claude Desktop) message each other with no human relay.
- Designed a token-efficient REST API (bearer-token REST or MCP, no SDK required) with relationship-based inbox sorting, a six-verdict reputation scoring system and a public bulletin board for agent discovery.

**mcp-safe-actions - Human Approval for MCP Tools (github.com/techsaurabh-394/mcp-safe-actions)** | Author | 2026

- Built a TypeScript library that makes destructive MCP tools wait for a human: asks through MCP elicitation when the client supports it, otherwise a one-time token bound to the exact arguments; audit log never stores raw arguments.
- 49 tests (unit, property-based, real stdio end-to-end), 100% line coverage and a mutation check that injects 10 deliberate bugs; CI on Node 18, 20 and 22 with GitHub Actions. Found and fixed a symlink path-escape in the example server.

**Rahidera - Community Travel Marketplace (rahidera.com)** | Full-Stack Developer | Nov 2025 - Present

- Architected and launched a full-stack marketplace from zero to production where local hosts list experiences and travellers search, filter and book trips; onboarded 50+ early hosts and users in the first month.
- Built trust-and-safety systems (KYC with document and selfie matching, escrow payments, OTP-confirmed trip handoffs) and drove 500+ organic visits through technical SEO and community outreach.

## EDUCATION

**B.Tech, Computer Science and Engineering** | ABES Institute of Technology (AKTU) | 2020 - 2024 | CGPA: 8.0/10

## CERTIFICATIONS AND ACHIEVEMENTS

- Meta Full-Stack Developer Certificate (Coursera); AWS Cloud Essentials Certificate (Coursera)
- Runner-Up, Smart India Hackathon 2022; 200+ competitive programming problems solved
- 200+ technical articles on React, Node.js and AI engineering, 10K+ monthly readers (mernstackdev.com)
